**Contents:**

# CHAPTER 1

---

## Installation

---

- Virtual environments are strongly recommended, to prevent dependencies with conflicting versions. Create a conda virtual environment and activate it:

```
$conda create -n aracle python=3.6 -y  
$conda activate aracle
```

- Install PyTorch stable and torchvision following the [official instructions](<https://pytorch.org/>), e.g.,

```
$conda install pytorch torchvision cudatoolkit=10.0 -c pytorch
```

- Now do one of the following.

**Option 3(a):** clone the repo (please do this if you'd like to contribute to the development).

```
$git clone https://github.com/jiwoncpark/aracle.git  
$cd aracle  
$pip install -e .
```

**Option 3(b):** pip install the release version (only recommended if you're a user). Not available yet!

```
$pip install aracle
```

- (Optional) To run the notebooks, add the Jupyter kernel.

```
$python -m ipykernel install --user --name aracle --display-name "Python (aracle)"
```
